The way a polarizing filter works is that it filters out certain light waves, blocking out some to reduce the glare at the point of capture. This means that you don't have to spend hours editing out the effect in one of the best photo editing software programs later; indeed, in some cases, this simply won't be possible. That's what makes a polarizer so powerful.

[The best polarizing filters in 2021 | Digital Camera World](#)

Augmented reality (AR) filters are computer-generated effects layered over the real-life image your camera displays. In Instagram Stories, an AR filter alters the image your front or back camera displays. Think of Instagram's face filters. For example, the puppy filter superimposes a dog's ears and nose over top of your image.
